PROJECTS

Patient's protein food management system

At present there are countless hospitals in the world and have many patients admitted in it. Each of the patients have different problem or disease that requires different set of diet to be followed to recover and post recovery. We ensure that patient follow proper diet in the hospital to ensure fast recovery of patient health. We have design the System method where patient can order food in hospital during lunch or any time from cafeteria.

Skills - HTML, CSS3, JAVASCRIPT, PHP.

Student electronic voting system

A student electronic voting system is a digital platform designed to facilitate the voting process for students in educational institutions such as schools, colleges, or universities. It aims to provide a convenient and efficient way for students to cast their votes for various purposes including student government elections, student council decisions, or other student-related matters.

Skills – SQl, HTML, PHP.
